

## Login and Minting NFT

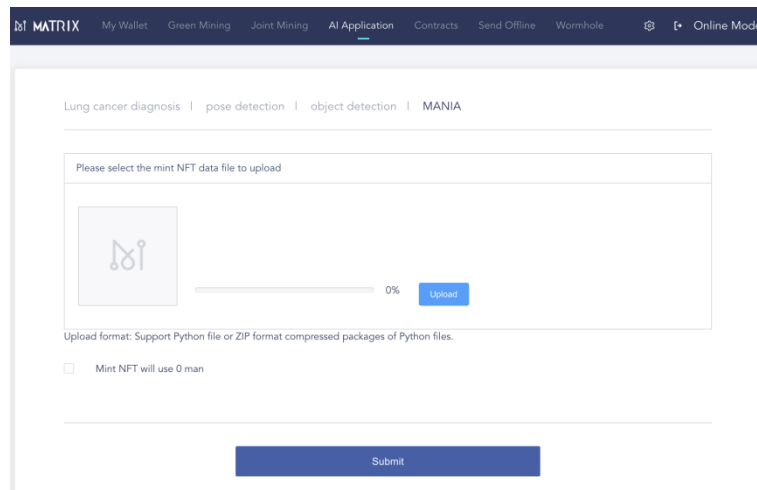

1. Visit [wallet.matrix.io](https://wallet.matrix.io). Log into your wallet.

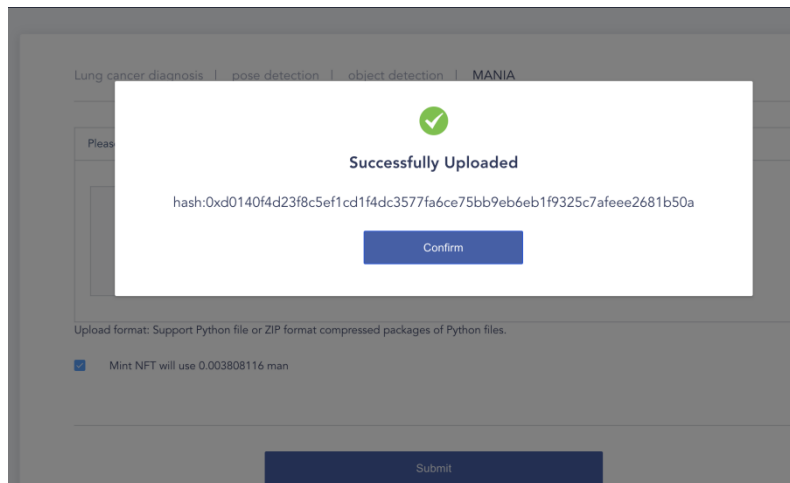

2. Select **MANIA** under **AI Application**.

3. Upload the algorithm for minting NFT to Matrix's distributed storage.

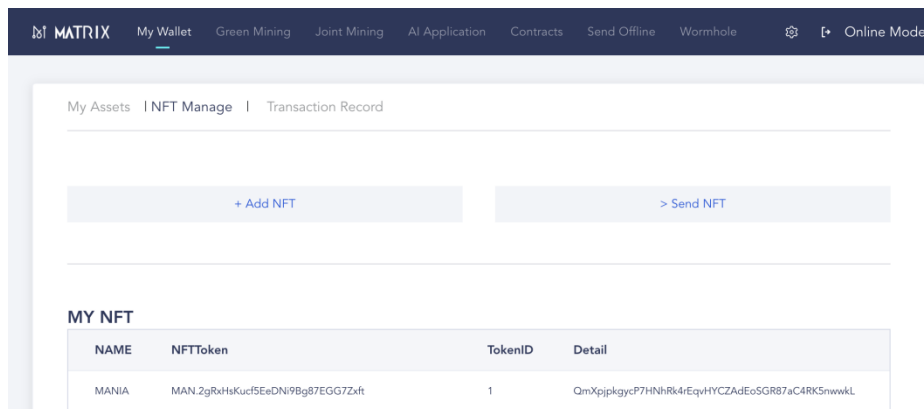

4. Mint NFT

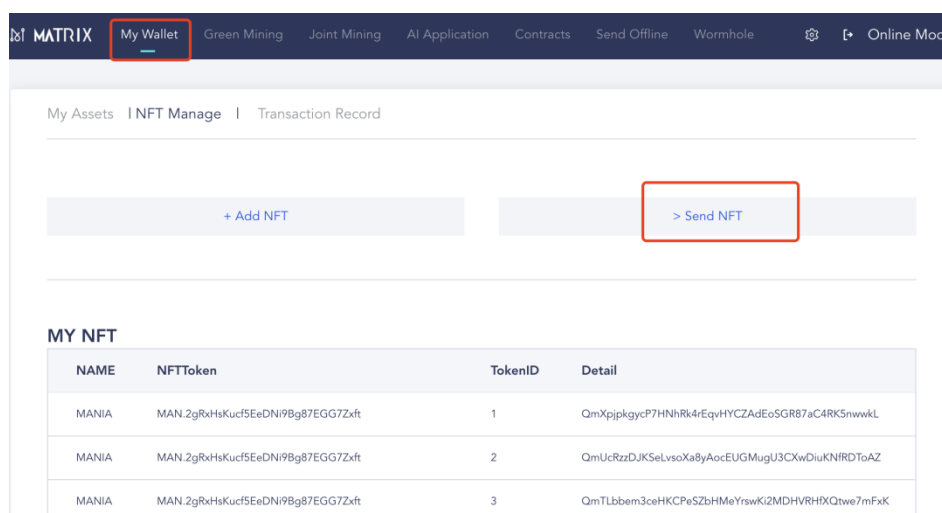

## Management and Transaction

1. Managing NFT: Return to **My Wallet**. Select **NFT Manage**. Here you can see details about your NFT.

2. Transferring NFT: a. Log into your wallet. Under **My Wallet**, select **Send NFT** under **NFT Manage**.

b. Fill in the **Beneficiary** address. Select the NFT type. Fill **NFT ID**, and click **Confirm** to finish.

I know

c. The beneficiary can log into his/her wallet and check the transfer under **NFT Manage**.

## Q&A

Q: What types of AI algorithm models can be uploaded currently?

A: So far we only support python files or python files compressed into zip files.

Q: How can one identify an NFT as an AI algorithm NFT minted on MANIA?

A: The contract address of MANIA beta test version is as below:

**MAN.2gRxHsKucf5EeDNi9Bg87EGG7Zxft**

An official address will be made public after the official launch of MANIA. One can use **Manage NFT** to check. If the contract address of an NFT matches MANIA's contract address, then this is an NFT minted on MANIA.

Q: What is the cost of minting an NFT on MANIA?

A: When the official version is released, minting NFT on MANIA will charge users two types of fees: the IPFS storage fee and the contract accessing fee. In the beta test version, only a 0.004 MAN contract accessing fee will be charged. Please make sure you have a sufficient number of MAN in your wallet for accessing the minting contract.

Q: How can I trade my algorithms?

A: An NFT minted on MANIA is the token of ownership for the correlating intellectual property. Whoever owns an NFT also owns the algorithm it represents. Currently, Matrix hasn't released an official contract for NFT trading. Users can carry out transactions through NFT transfers, or they may also use their own smart contracts.

Q: What future updates to MANIA can users expect?

A: In the future, users can expect a wide range of new functions to come to MANIA. For instance, a cross-chain function will allow people to mint on Ethereum or BSC an algorithm originally uploaded on MANIA. Users may also transfer an NFT minted on MANIA cross-chain to Ethereum or BSC. This way, users' algorithms can circulate among different NFT exchange platforms seamlessly.
